Supplementary Figure S1. Survival curves for disomy 3 non-metastatic UM samples used in aSNP analysis. Dashed lines indicate the 95% confidence intervals for survival of the patient over a 8 year period following diagnosis of UM, the line between the dashed lines being the predicted survival curve for the individual. The fourth line indicates the survival of an age and gender matched control population. The y-axis scale is 0 to 1 with 0 being 0% (A) Tumour DS1, (B) Tumour DS2, (C) Tumour DS3.
