

Supplementary Figure S1. Selective inhibition of GSK3 using SB216763 suppresses ECM expression in primary human TM cells. **(A)** Representative immunoblot and **(B)** densitometric analysis of ECM proteins from conditioned media of primary human TM cells incubated for 24 h with either 10 μ M SB216763 or vehicle. Data are expressed as the mean \pm SEM (* p <0.05 vs. corresponding control group; n =3, where “ n ” refers to the number of independent experiments performed using “ n ” different human TM cell strains).
