Supplementary Figure S1. SERPINA3K suppressed the leukocyte infiltration in the OIR rat retina. OIR rats received an intravitreal injection of SERPINA3K (10 µg/eye) and the same amount BSA into the contralateral eyes at P14. Immunostaining of OIR rat retinal sections (P16) with an antibody against CD45 in the BSA-injected (A) and SERPINA3K-injected eyes (B). Arrows indicate CD45<sup>+</sup> cells. Scale bar: 20 µm.
