Figure S1. Localization of SPARC and MMPs. Sections of normal conjunctiva (A-C) and pterygium (E-F) from the same patient were immunostained with antibodies for SPARC (green) and the indicated MMPs (red). Nuclei were visualized by staining with DAPI (blue). CE, conjunctiva epithelium; PE, pterygium epithelium; S, stroma. Merged images are shown in the overlay. Scale bar, 25 μM.
