</tbody>
</table>

Corresponding RNFL characteristics

| Angular width of RNFL defects (°) | 25 ± 11 | 44 ± 10 | <0.001 |
| Angular location of RNFL defects from the horizontal meridian (°) | 56 ± 12 | 56 ± 14 | 0.845 |
| Angular location of RNFL defects from a line connecting the fovea and the center of the optic disc (°) | 47 ± 11 | 48 ± 12 | 0.682 |

IOP = intraocular pressure; MD = mean deviation of perimetry; PSD = pattern standard deviation of perimetry; dB = decibels; RNFL = retinal nerve fiber layer. Values are mean ± standard deviation.

*Comparison between 2 groups by Mann-Whitney U comparison
