

Supplemental Figure Legend

Supplemental Figure 1

The phase retardation and intensity images. The phase retardation images were stored as 32-bit precision floating point data sets in radian units. Bleb area was surrounded by red dotted line.

Supplemental Figure 2

The unmasked image of intensity images and phase retardation images with PS-OCT. Dot-line indicates boundary between conjunctiva and sclera. Arrow indicates irregular and abnormal phase retardation. IF: internal fluid pool, S: sclera, F: sclera flap.
