Supplementary Figure 1.
Supplementary Figure 1. Examples of CD160 immunolabeling controls. CD160 positive cells (anti-CD160, upper-left panel) and macrophages (anti-CD68, lower-left panel) are co-detected with red markers in ciliary body and retina serial sections of a pathological eye. Negative control for CD160 immunolabeling (murine Isotype IgG1, upper-right panel) was performed on serial section of the same pathological eye. Positive control for CD160 immunolabeling was performed on tonsil tissue sections (anti-CD160 antibody, lower-right panel). Original magnifications x100. Scale bars : 400 μm.
