Supplement Figure 2: Unaltered tear fluid soluble factors levels in DED patients.

The graphs indicate the levels of IL-1α (a), IL-8 (b), IL-9 (c), TNFα (d), MIP1β (e), MCP1 (f) and ICAM1 (g) in control subjects (n=33) and DED patients (n=47). Bar graphs indicate Mean±SEM; IL – interleukin; TNFα – tumor necrosis factor alpha; MIP-1β – Macrophage Inflammatory Protein 1 beta; MCP1 – Monocyte chemoattractant protein 1; ICAM1 – Intercellular Adhesion Molecule 1; DED – dry eye disease; SEM - standard error of the mean.
