Supplementary Figure 3. Treatment with O/A for 6 h did not cause cell death in DKO_HeLa cells.

WT and DKO_HeLa cells were treated with O/A for 6 h and analyzed through immunofluorescence microscopy. The mito-Keima signals transported to lysosomes were considered to represent “mitophagy” (in red), and non-degraded mitochondria were designated as “mitochondria” (in green). Scale bars, 10 μm.
