Supplementary Figure 1- Anisomycin inhibits retinal protein synthesis. A) Anti-puromycin western blot showing protein synthesis rates in the retinas of P35 C57BL/6 mice 2 hours post-treatment. B) Scan of coomassie stained membrane that the puromycin western blot was normalized to. C) Histogram showing the change in protein synthesis following anisomycin treatment. a.u- arbitrary units. kD-kilodaltons. Significance denoted by: ****p<0.001
