

Supplemental Figure, Part A

Supplemental Figure, Part B

Supplemental Figure. Time-course of IOP responses of individual mice either vehicle-treated (Part A, previous page) or telmisartan-treated (Part B, above). Each box shows IOP readings starting at the time of injection (0 days post-injection) for un-injected control eyes (blue) and bead-injected eyes (red) of individual mice. The population mean IOP of un-injected and untreated eyes (normal IOP) is shown as a dashed yellow line. The mean normal IOP plus 2 SD is shown as a dashed green line.
