Supplemental Figure 3. Greater nuclear density and rounder nuclei in PPS than peripheral sclera. (A) Schematic of scleral section indicating different regions, including optic nerve (ON, white), PPS, and peripheral sclera (grey). (B) Image of scleral section stained for nuclei (Sytox Green, white) with ON, PPS, and peripheral sclera depicted (scale bar = 500 µm). (C) Nuclear density is increased in PPS compared to peripheral sclera. * $P<0.05$, ** $P<0.01$, **** $P<0.0001$.
