Figure S4. POS phagocytosis tracking by gold loaded POS with TEM.

Representative images of conventional EM of pRPE pulsed for 4h with POS tagged with 10nm gold colloid. (A) At the end of the pulse, POS on the cell surface (pre-internalization) are clearly tagged with gold indicated by the arrows. (B) 4h post-pulse, phagosomes within the RPE are also identifiable by the presence of gold.
