Supplementary Figure 2. Individual resolution acuity data (min of arc) at the fovea ($A$), nasal ($B$), and inferior ($C$) visual fields for horizontal gratings versus vertical gratings. Red symbols: Myopic-Astigmatic (MA) group; Green symbols: Simple-myopia (SM) group; Blue symbols: Emmetropic (EM) group. The red, green, and blue lines represent the mean ratio between the resolution acuity for horizontal and vertical gratings in the MA, SM, and EM groups, respectively. The gray area represents resolution acuity at the fovea poorer than 1 min of arc (Snellen acuity 20/20).
