

**Figure A3. Frequency of LAFs as a function of task-steps.** Rows indicate sub-tasks and each column entry indicates the number of LAFs occurring in that subtask and the number of sub-task steps ahead the LAF was directed. A sub-task step of zero means the LAF was directed within the ongoing sub-task. LAFs are primarily directed to other objects within 10 task steps but can go well beyond (~50 in the extreme)
