

Table S3b: **P-values and significance levels for all comparisons of manual cell/row counts derived from central histology sections.** Multiple comparisons of means with Tukey's approach were performed between different measurement positions at 1, 2, 3, 4, and 6 mm ventral to the central ONH rim for ganglion cell and INL and ONL row counts. Comparison between positions x and y is indicated as x – y. Asterisks indicate significance levels for all significant differences: (*) $P \leq 0.05$ and (***) $P \leq 0.001$.
