Supplementary Figure 1. A-C: Presence of LYVE1+ cells are observed mostly in the anterior stroma of central cornea and surrounding area, with no significant difference between anti-VEGF DDS (A) and sham DDS treated eyes (B). Quantification of corneal stromal LYVE1 expression at 3 months (C), ns = P > 0.05, unpaired t test, n=3. A, B: Scale bar=100μm.
