

Supplement Table 3. Odds ratios for aqueous flare increase in relation to anti-inflammatory medication

<b>Anti-inflammatory medication</b>	<b>NSAID (cohort steroid)</b>	<b>NSAID + steroid (cohort steroid)</b>
Aqueous flare increase ≥ <b>50%</b>	OR 0.490 95CI 0.306-0.783 <i>P</i> =0.004	OR 0.578 95CI 0.359-0.932 <i>P</i> =0.033
Aqueous flare increase ≥ <b>100%</b>	OR 0.392 95CI 0.238-0.644 <i>P</i> <0.001	OR 0.458 95CI 0.278-0.755 <i>P</i> =0.003
Aqueous flare increase ≥ <b>200%</b>	OR 0.416 95CI 0.211-0.817 <i>P</i> =0.015	OR 0.455 95CI 0.228-0.907 <i>P</i> =0.036

Aqueous flare increase (%) at 28 days represented in relation to preoperative value.
